

**Amendments to the Claims:**

The listing of claims will replace all prior versions and listings of claims in the application:

**Listing of Claims:**

5

Claim 1 (currently amended): An input-sensor-integrated liquid crystal display panel, comprising:

a first substrate having at least one pixel controlling circuit;

10 a second substrate having a touch-detecting circuit and a color filter formed on the touch-detecting circuit, being positioned on top of the first substrate, the second substrate further having:

at least one protrusion jutting out the first substrate, the second substrate and the protrusion being ~~integral~~ one piece; and

15 a plurality of second signal connecting contacts disposed on the protrusion of the second substrate, the second signal connecting contacts connecting to the detecting circuit for transmitting ~~a plurality of pixel controlling signals~~ and a plurality of touch-detecting signals;

a liquid crystal layer filled between the space formed by the first substrate and the second substrate;

20 wherein the input-sensor-integrated liquid crystal display panel includes no glass substrate disposed between the touch-detecting circuit and the liquid crystal layer.

Claims 2-5 (canceled)

25 Claim 6 (original): The input-sensor-integrated liquid crystal display panel of claim 1 wherein the touch-detecting circuit is positioned on an inner side of the second substrate facing the first substrate.

Claim 7 (canceled)

30

Claim 8 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 1 wherein the first substrate dis-coincides with the second substrate and has at least one protrusion.

- 5 Claim 9 (currently amended): The input-sensor-integrated liquid crystal display panel of claim 8 wherein the protrusion of the first substrate includes a plurality of first signal connecting contacts.

Claims 10-11 (canceled)

10

Claim 12 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 1 wherein the second substrate has at least one protrusion jutting out the first substrate.

- 15 Claim 13 (currently amended): An input-sensor-integrated liquid crystal display panel, comprising:

a first substrate having at least one pixel controlling circuit;

- a second substrate having a touch-detecting circuit and a color filter, being positioned on top of the first substrate, the color filter and the touch-detecting circuit being formed on different sides of the second substrate, the second substrate further having:
- 20

at least one protrusion jutting out the first substrate, the second substrate and the protrusion being ~~integral one piece~~; and

- a plurality of second signal connecting contacts disposed on the protrusion of the second substrate, the second signal connecting contacts connecting to the detecting circuit for transmitting ~~a plurality of pixel controlling signals~~ and a plurality of touch-detecting signals;
- 25

a liquid crystal layer filled between the space formed by the first substrate and the second substrate;

- 30 wherein the input-sensor-integrated liquid crystal display panel includes no glass

substrate disposed between the touch-detecting circuit and the second substrate.

5 Claim 14 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 13 wherein the touch-detecting circuit is positioned on an outer side of the second substrate.

10 Claim 15 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 13 wherein the first substrate dis-coincides with the second substrate and has at least one protrusion.

Claim 16 (currently amended): The input-sensor-integrated liquid crystal display panel of claim 15 wherein the protrusion of the first substrate includes a plurality of first signal connecting contacts.

15 Claim 17 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 13 further comprising a polarizer.

20 Claim 18 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 17 wherein the touch-detecting circuit is positioned between the second substrate and the polarizer.

25 Claim 19 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 13 wherein the second substrate has at least one protrusion jutting out the first substrate.

Claim 20 (currently amended): An input-sensor-integrated liquid crystal display panel, comprising:

30 a first substrate having at least one pixel controlling circuit, and a color filter formed on the pixel controlling circuit;  
a second substrate having a touch-detecting circuit and being positioned on top of

the first substrate, the second substrate further having:

at least one protrusion jutting out the first substrate, the second substrate and the protrusion being ~~integral~~ one piece; and

5 a plurality of second signal connecting contacts disposed on the protrusion of the second substrate, the second signal connecting contacts connecting to the detecting circuit for transmitting ~~a plurality of pixel controlling signals and~~ a plurality of touch-detecting signals;

a liquid crystal layer filled between the space formed by the first substrate and the second substrate;

10 wherein the input-sensor-integrated liquid crystal display panel includes no glass substrate disposed between the touch-detecting circuit and the second substrate.

Claim 21 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the touch-detecting circuit is positioned on an inner side  
15 of the second substrate facing the first substrate.

Claim 22 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the touch-detecting circuit is positioned on an outer side  
20 of the second substrate.

Claim 23 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the first substrate dis-coincides with the second substrate and has at least one protrusion.

25 Claim 24 (currently amended): The input-sensor-integrated liquid crystal display panel of claim 23 wherein the protrusion of the first substrate includes a plurality of first signal connecting contacts.

Claim 25 (previously presented): The input-sensor-integrated liquid crystal display  
30 panel of claim 20 further comprising a polarizer.

Claim 26 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 25 wherein the touch-detecting circuit is positioned between the second substrate and the polarizer.

5

Claim 27 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the second substrate has at least one protrusion jutting out the first substrate.
